Our **vision** and mission are comprised of the believe that today companies must work together to strive and be sustainable. We believe that together businesses can develop like never before.

Oties's name comes from a combination of letters in the year 855. The year when Saints Cyril and Methodius devised the Glagolitic alphabet. This to us means sustainable and has provided a **piece** for all future communication in every way.

The alphabet is widely used today throughout the world. However, Cyril and Methodius didn't perform this task alone, they were assisted by seven of their students and later their legacy of the alphabet was popularised further to the entire world by other wise people. We see this idea as a model of **development** both for us and the companies we work with.

This incredible deed to us is motivating and we envision creating amazing companies and developing outstanding ideas to their full potential by providing **value**. Crafting our products and delivering them to cement our clients' digital presence and establish a concrete foundation which will effectively maintain the future of any business.
